Percentages are stated as a percent of net assets.

- (a) Exchange-traded.
- (b) Represents less than 0.05% of net assets.
- (c) 100 shares per contract.

Valuation Measurements

Securities which are traded on a national stock exchange are valued at the last sale price on the securities exchange on which such securities are primarily traded. Securities that are traded on The Nasdaq OMX Group, Inc., referred to as Nasdaq, are valued at the Nasdaq Official Closing Price. Exchange-traded securities for which there were no transactions are valued at the current bid prices. Securities traded on only over-the-counter markets are valued on the basis of closing over-the-counter bid prices. Short-term debt instruments maturing within 60 days are valued by the amortized cost method, which approximates fair value. Amortized cost is not used if its use would be inappropriate due to credit or other impairments of the issuer, in which case the security's fair value would be determined, as described below. Debt securities (other than short-term instruments) are valued at the mean price furnished by a national pricing service, subject to review by the Fund's investment adviser, which acts as the "Valuation Designee" under Rule 2a-5 of the 1940 Act, and determination of the appropriate price whenever a furnished price is significantly different from the previous day's furnished price. Options written or purchased by the Fund are valued at the last sales price. If there are no trades for an option on a given day, options are valued at the mean between the current bid and asked prices. The value of a foreign security or other asset shall be determined as of the normal close of trading on the foreign exchange or other market on which it is traded or as of the Value Time, if that is earlier, in its national foreign currency or the Euro, as applicable, and shall then be converted into its U.S. dollar equivalent at the prevailing foreign currency exchange rate as of the close of the New York Stock Exchange, generally 4:00 p.m. Eastern Standard Time, on the Value Date. If market quotations are not readily available for a security or if a security's value has been materially affected by events occurring after the close of the exchange or market on which the security is principally traded, then that security may be valued by another method that the Valuation Designee believes accurately reflects fair value. A security's valuation may differ depending on the method used for determining fair value. Fair value in this context is the value of securities for which no readily available market quotations exist, as determined in good faith by the Adviser pursuant to fair value methodologies established by the Adviser as the Valuation Designee under the supervision of the Board.

The Fund has adopted authoritative fair valuation accounting standards which establish an authoritative definition of fair value and set out a hierarchy for measuring fair value. These standards require additional disclosures about the various inputs and valuation techniques used to develop the measurements of fair value and a discussion of changes in valuation techniques and related inputs, if any, during the period. In addition, these standards require expanded disclosure for each major category of assets. These inputs are summarized in the three broad levels listed below:

Level 1 - Quoted prices in active markets for identical securities.

Level 2 - Other significant observable inputs (including quoted prices for similar securities, interest rates, prepayment speeds, credit risk, etc.)

Level 3 - Significant unobservable inputs (including the Fund's own assumptions in determining the fair value of investments)

The inputs or methodology used for valuing securities are not an indication of the risk associated with investing in those securities. The following is a summary of the inputs used to value the Fund's investments as of February 29, 2024:

	<u>Level 1</u>	<u>Level 2</u>	<u>Level 3</u>	<u>Total</u>

Refer to the Schedule of Investments for industry classifications.

* Options written are derivative instruments not reflected in the Schedule of Investments and are reflected at value.

The Fund did not invest in any Level 3 investments during the period.

Derivative Instruments and Hedging Activities

The Fund may write covered call options and put options on a substantial portion of the Fund's long equity portfolio as a means to generate additional income and to tax-efficiently enter and exit positions. The Fund will not use this strategy as a means of generating implicit leverage. In other words, if all put options were to be exercised, the Fund will generally have enough cash on hand to purchase the assigned shares. When the Fund writes an option, an amount equal to the premium received by the Fund is recorded as a liability and is subsequently adjusted to the current fair value of the option written. Premiums received from writing options that expire unexercised are treated by the Fund on the expiration date as realized gains from options written. The difference between the premium and the amount paid on effecting a closing purchase transaction, including brokerage commissions, is also treated as a realized gain, or, if the premium is less than the amount paid for the closing purchase transaction, as a realized loss. If a call option is exercised, the premium is added to the proceeds from the sale of the underlying security in determining whether the Fund has realized a gain or loss. If a put option is exercised, the premium reduces the cost basis of the securities purchased by the Fund. The Fund, as a writer of an option, bears the market risk of an unfavorable change in the price of the security underlying the written option. Upon writing an option, the Fund is required to pledge an amount of cash or securities, as determined by the broker, as collateral. As of February 29, 2024, the Fund held securities with a value of \$12,721,330 and cash of \$1,302,026 as collateral for options written. During the period, the Fund used written put options in a manner consistent with the strategy described above.

The value of Derivative Instruments as of February 29, 2024, are as follows:

<u>Liability Derivatives</u>		
<u>Derivatives not accounted for as hedging instruments</u>	<u>Location</u>	<u>Value</u>
Equity Contracts - Options	Options written, at value	(\$36,171)

The average monthly value of options written during the period ended February 29, 2024, was \$112,929.

Derivative Risks

The risks of using the various types of derivatives in which the Fund may engage include the risk that movements in the value of the derivative may not fully offset or complement instruments currently held in the Fund in the manner intended by the Adviser, the risk that the counterparty to a derivative contract may fail to comply with its obligations to the Fund, the risk that there may not be a liquid secondary market for the derivative at a time when the Fund would look to disengage the position, the risk that additional capital from the Fund may be called upon to fulfill the conditions of the derivative contract, the risk that the use of derivatives may induce leverage in the Fund, and the risk that the cost of the derivative may reduce the overall returns experience by the Fund.

In October 2020, the SEC adopted new regulations governing the use of derivatives by registered investment companies ("Rule 18f-4"). The Fund has adopted policies and procedures to comply with Rule 18f-4.
